Of the Eclipses this Year 1664.

Sin that year wherein two Central or near Central Changes fall out in fix moneths space there can be no Lunar Eclipse; so, on the contra y, it may sometimes fall out, that when in the space of six moneths there are two Full Moones near the Nodes, in that very year also shall no Solar Eclipses be celebrated. And hereof we have an example this present year 1664: wherein (Feb. 1. and Ju'y 27. S.V.) we meet with two Lunar Eclipses not far from the Nodes, but with no Solar Eclipse throughout the whole year. For (saith Laurentius Eichstadius) Que à me quasita suit desettes Solis die 18. Of the first Eclipse of the Moon,

Which happens the first of February, but not visible at all in our Horizon. At Uraniburge the Moon will rise half darkened, so that all the more Eastern places of Germany may behold the end of the Eclipse: but in the East part of Great Tartaria, in Melair, Sandri, Japonia, Xicoa, the Philippine, Delas velas, Ceira, Dira and Campagua Islands, she will be totally eclipsed in their very Meridian.

Of the fecond vifible Eclipfe of the Moon.

This may be observed (if the Air savour us) July 27. (being Wednesday) 21' past 11 at night, according to the apparent time of the true opposition; for then will the Moon be eclipsed to the quantity of 16. Digits and upward, in the 14. degree 54. of Aquiry.

Fove's winged Herald from the parching Sun Completes his utmost Elongation. The Sun and Saurn, Jove and Hermes, Smile; As if all one, yet one a Crocodile.

So cap and cringe some fly Fanatichs still, But truft 'em not; For then they mean to kill.
